DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2, 4 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, a "specific voltage" is disclosed. What is this "specific voltage"? The voltage of the alternator? Output voltage of the rectifier? What is meant by a "terminal" voltage?

In claim 7, the transistor has a "source" connected to the field coil. Is the same "source" connected to the field coil and to the transistor? Is the same source providing power to the transistor and also delivering power to the field coil? What is the difference between the "source" and the current supply circuit"? Is the "source" the same as the "source voltage"?

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made

4. Claims 1, 3 and 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mashino et al in view of Iwatani et al (US 5,144,220).

Mashino et al discloses a control apparatus for a vehicle having a switching device 11, which is a MOSFET transistor, a flywheel diode 12, a voltage detection circuit and a drive circuit for driving the switching device 11, which can be turn on or off depending on voltage level, thus affecting the excitation of the field coil 2 (see abstract & figure 1).

However, Mashino et al does not disclose explicitly having a field coil in parallel with a diode.

On the other hand, Iwatani et al discloses for the purpose of stabilizing effectively the rotation of the engine, a control apparatus for a vehicle having a field coil 102, a flywheel diode 312, which is connected in parallel with the field coil 302 (see figure 1).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to design a control apparatus as disclosed by Mashino et al and to modify the invention by having a field coil in parallel with a diode for the

purpose of stabilizing effectively the rotation of the engine as disclosed by Iwatani et al.

Allowable Subject Matter

5. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claim 2 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
